

SURGICAL SUPPORT ARM DOCKING APPARATUS

ABSTRACT OF THE DISCLOSURE

An assembly for exchanging retractor support arms within a retractor support clamp. The assembly includes a main body having a surface defining a cavity extending into the main body from a first end. A support arm having an end portion with a substantially complimentary configuration to the surface defining the cavity is positionable within the cavity. A retaining mechanism is disposed about the main body and in communication with the end portion where the retaining mechanism retains the end portion within the main body.
